A product of Datatech BD Ltd.
Software that runs business.

INTRODUCTION

What DT Medix is, and who builds it

DT Medix is diagnostic center, pathology lab and clinic management software. It follows a patient through the real flow of a lab, from registration and appointment to the invoice, the barcode sample, the lab result and the report, and it also runs the staff side with attendance, leave and payroll.

DT Medix is built by Datatech BD Ltd., a Dhaka software company. Each center receives its own installation and database, so patient data is never mixed with another business. The whole interface works in English and Bangla.

OVERVIEW

One connected system for the whole diagnostic center, not just the billing counter

Most diagnostic center software stops at invoices. DT Medix follows the patient through the real flow of a lab: registration, doctor appointment, test order, invoice and money receipt, sample collection with a barcode label, receiving in the lab, result entry with automatic abnormal flags, critical value acknowledgement and report templates for pathology and imaging.

It is also built to run the business around the lab. Owners get multi-branch control, role-based access, discount and refund approvals and an access log of every patient record view. HR teams get employees, shifts, leave, attendance from ZKTeco fingerprint devices or manual entry, and monthly payroll with printable payslips.

Every center gets its own installation and database, so patient data is never mixed with another business. The whole interface works in English and Bangla, with Bangla names and receipts, and it is designed for fast keyboard-first work at the reception and lab counters.

DT Medix at a glance

- Diagnostic center, pathology lab and clinic management system by Datatech BD Ltd.
- Patient registration with duplicate detection and family linking
- Doctor schedules, token appointments and an online booking page
- Test catalog with reference ranges by age and sex, and health packages
- Reception counter with invoices, partial payments, dues and receipts
- Barcode sample labels, lab worklists and turnaround time tracking
- Result entry with automatic flags and critical value acknowledgement
- Staff attendance (ZKTeco and manual), leave, payroll and payslips
- Branch isolation, eight staff roles and a full access log

WHY CENTERS NEED IT

Diagnostic centers lose time, money and trust in places the owner cannot see

Paper registers, spreadsheets and a separate billing program can run a small lab, until the first mix-up, missed due or late report.

Sample mix-ups

Hand-written labels and loose tubes cause wrong-patient results. Barcode labels printed at collection remove the guesswork.

Duplicate patients

The same patient registered twice splits history and billing. Duplicate warnings on mobile and name keep one clean record.

Late and lost reports

Without a worklist nobody sees which test is overdue. Turnaround countdowns and urgent pinning show what needs attention first.

Dues and discounts out of control

Verbal discounts and forgotten balances leak revenue. Approval limits, reasons and a due list keep every taka accounted for.

Critical values missed

A dangerous result must reach the doctor. DT Medix blocks the result until someone records who was informed and when.

Staff time and salary guesswork

Attendance on paper and salary in a spreadsheet invite disputes. Device punches feed payroll so the month-end sheet is ready.

HOW WE ANSWER

Each problem, and the DT Medix answer

PROBLEM	ANSWER
Sample mix-ups	Barcode labels printed at collection; scan to open any sample.
Duplicate patients	Warning on mobile and similar name; family members linked.
Late and lost reports	Worklist with turnaround countdown and urgent pinning.
Dues and discounts	Approval limits with reasons; due balance is always calculated.
Critical values	Acknowledgement with name and time before the result moves on.
Staff time and salary	Device punches and leave feed the monthly payroll sheet.

WHY IT PAYS

Faster counters, safer results, clearer numbers

Three promises that every diagnostic center owner can check in the free demo.

Work faster

- Type-ahead patient and test search at the counter
- Invoice, receipt and sample labels printed together
- Keyboard shortcuts and tab-through result entry
- Token queue so patients stop crowding the desk

Stay safe and accurate

- Barcode samples and a clear status at every step
- Reference ranges by age and sex flag abnormal values
- Critical values need acknowledgement before moving on
- Every record view and override is logged

See your numbers

- Dues, partial payments and refunds tracked per invoice
- Discount limits with manager approval
- Branch-wise data for the owner
- Payroll built from real attendance

WHO IT IS FOR

Built for diagnostic centers, pathology labs and clinics

Diagnostic centers

Pathology, imaging and ECG under one roof, with reception, collection and lab workflows.

Pathology and clinical labs

Barcode samples, reference ranges, flags and critical value control for every test.

Clinics and polyclinics

Doctor schedules, token queues, consultation fees and follow-up rules.

Multi-branch groups

Branch switcher, branch-wise staff and data, shared catalog and owner view.

Collection centers

Counter collection and branch price lists for centers that send samples to a main lab.

Doctor chambers

Appointments, a live queue and patient records for private consultation rooms.

Small hospitals and cardiac centers

Diagnostics, ECG and echocardiography services with billing and staff payroll.

Specialty clinics

Gynae, pediatrics, endocrinology and more, with each doctor on their own schedule.

WORKFLOW

From the front desk to the finished report

Every step uses the same patient, order and sample records, so nothing is typed twice and every handover is visible. The numbers below are the screens a patient passes through in a normal diagnostic center visit.

1 Register

Create or find the patient; duplicate warning on mobile and name.

2 Book

Pick a doctor slot and issue a queue token, or skip for walk-ins.

3 Order

Add tests and packages at the reception counter, apply approved discounts.

4 Pay

Take cash, partial payment or leave a due; print invoice and receipt.

5 Collect

Print barcode labels, collect the sample and record the collector.

6 Receive

Lab scans the label, receives or rejects the sample with a reason.

7 Result

Enter results; flags and critical alerts are calculated for you.

8 Report

Use a table or narrative template; view the finished result.

BEHIND THE COUNTER

The business side runs on the same data

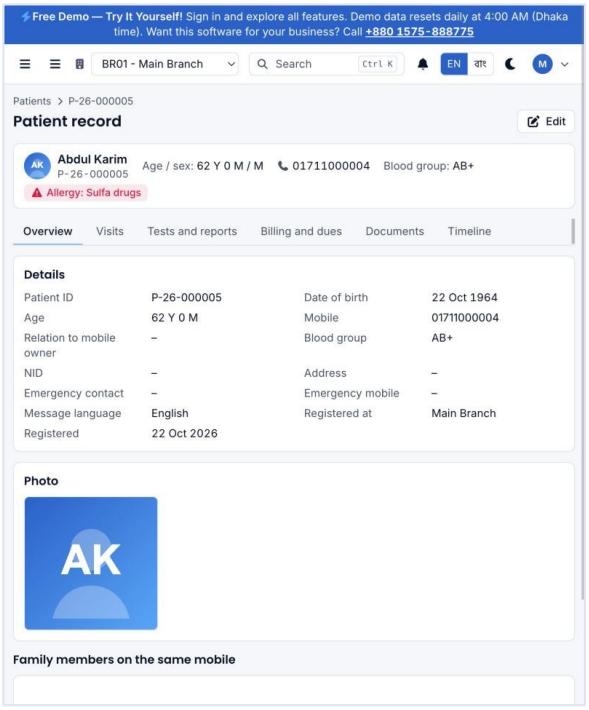

- Discounts, refunds and cancellations after collection wait for a manager approval, with a reason on record.
- Staff punch in at a ZKTeco fingerprint device, or a manager marks attendance by hand.
- Late minutes, overtime, leave and holidays feed the monthly payroll and printable payslips.
- Owners switch between branches; branch staff only ever see their own branch.

FEATURE 01

Patient management and history

Register a patient in seconds and keep one clean record with visits, tests and billing together. Search by mobile, name or patient ID.

- Gapless patient IDs per year, for example P-26-000123
- Duplicate warning on mobile and similar name
- Family members linked on one mobile number
- Allergy alerts and blood group on every screen
- Photo, emergency contact, notes and Bangla names
- A patient banner prevents wrong-patient errors

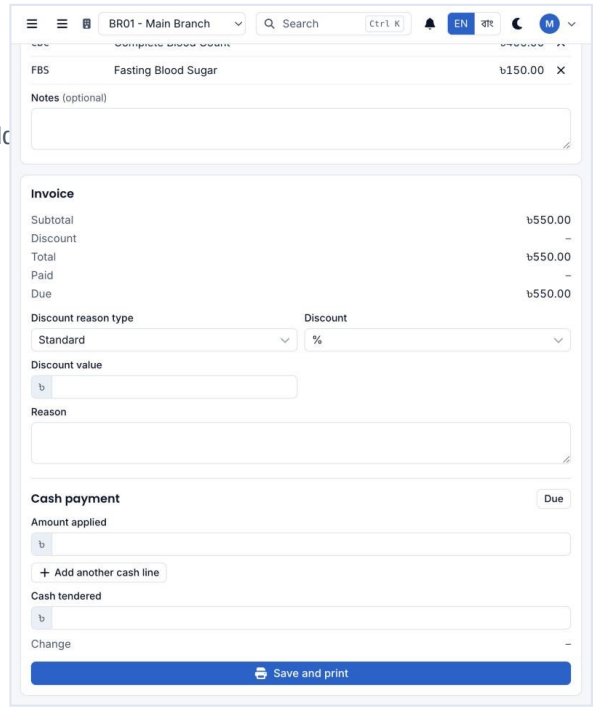

DT Medix patient record with age, sex, blood group and allergy alert

FEATURE 02

Reception counter and billing

A fast counter for a busy diagnostic center: pick the patient, add tests or packages, apply a discount, take cash and print.

- Type-ahead search with price, turnaround time and preparation note
- Packages expand into their tests
- Percent or fixed discounts with reasons
- Partial payment, due balance and money receipts
- Invoice, receipt and sample labels in one print action
- Price snapshot, so old invoices never change

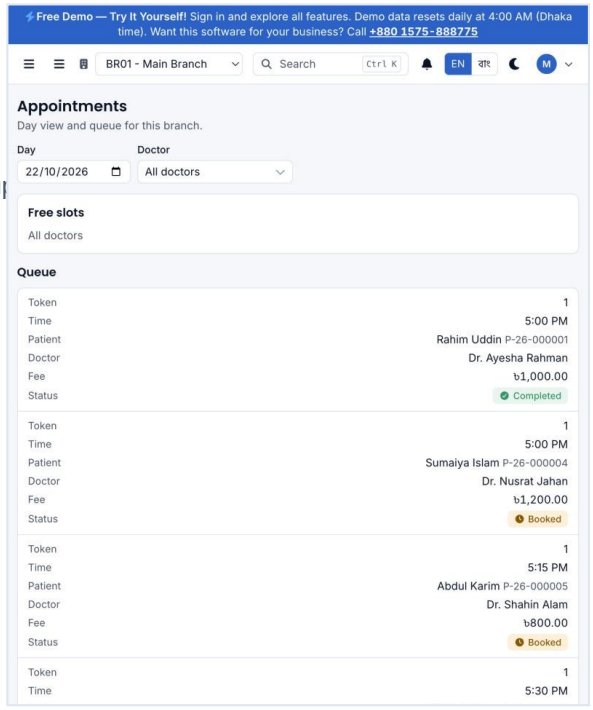

DT Medix reception counter with selected tests, invoice summary and cash payment

FEATURE 03

Doctor appointments and token queue

Schedules, slots and a live queue for consultants, with follow-up fees and clear status for every visit.

- Weekly schedules per doctor and per branch
- Only free slots are offered, a token number is issued
- Booked, arrived, in consultation and completed flow
- No-show and cancellation with a reason
- Follow-up window with reduced fee
- Doctor leave days block booking

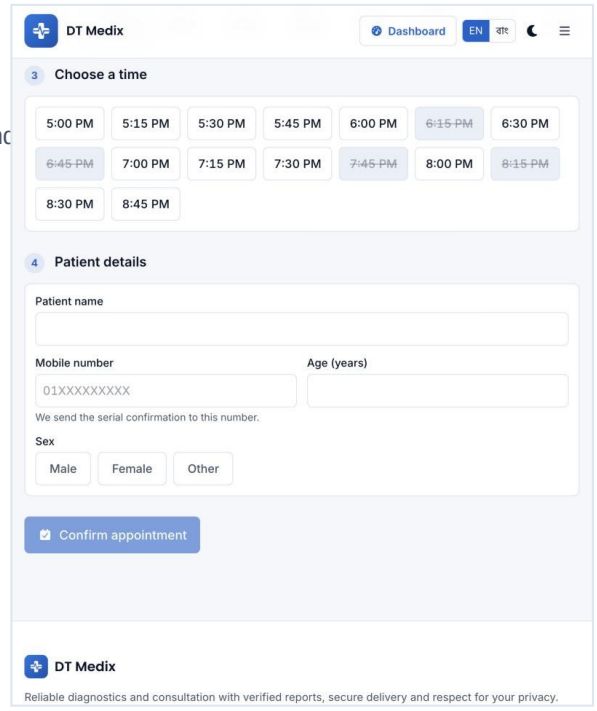

DT Medix appointment queue with token numbers, doctors and fees

FEATURE 04

Online doctor booking page

Your center gets a public website with doctors, tests, prices and an online appointment page that respects real free slots.

- Choose doctor, day and time in four steps
- Public price list and health packages
- Doctor profiles with specialty and schedule
- FAQ, patient guide and privacy pages
- English and Bangla, mobile friendly
- Search-friendly pages for local patients

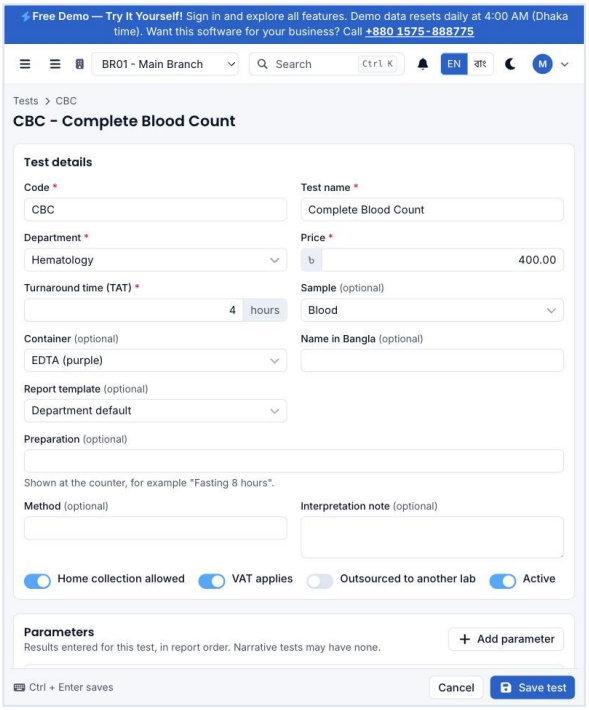

DT Medix online booking page showing free time slots and patient details

FEATURE 05

Test catalog, parameters and packages

A complete catalog for pathology and imaging: tests, parameters, units, reference ranges, critical limits and health packages.

- Departments for hematology, biochemistry, serology, microbiology, imaging and cardiology
- Number, text, choice and calculated result types
- Reference ranges by age and sex
- Sample type, container, preparation and home-collection flag
- Health packages such as diabetes and full body checkup
- Optional price lists per branch

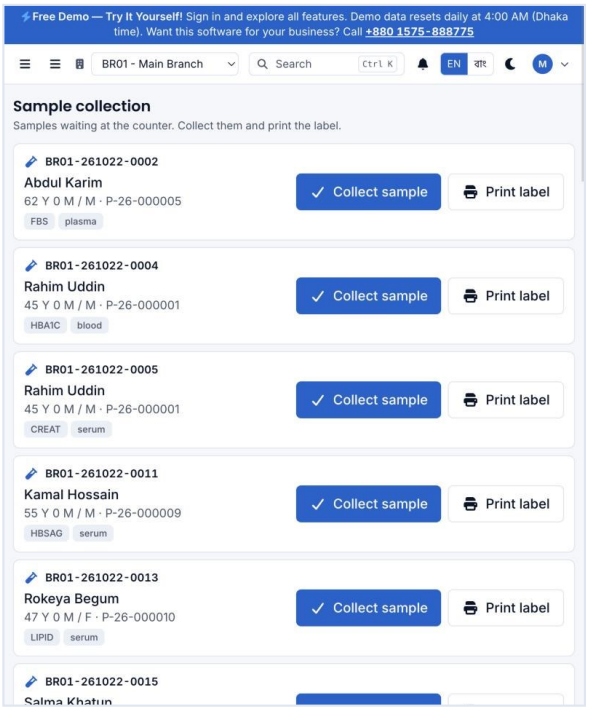

DT Medix test editor with price, turnaround time, sample and preparation fields

FEATURE 06

Barcode sample collection and tracking

Every sample gets a barcode label and a clear status from the collection counter to the lab bench.

- Unique sample IDs per branch per day
- Code 128 barcode labels for label printers
- Collect, receive and reject with a reason
- Recollect a rejected sample in one click
- Scan or type a sample ID to open it
- Collector and time recorded for each sample

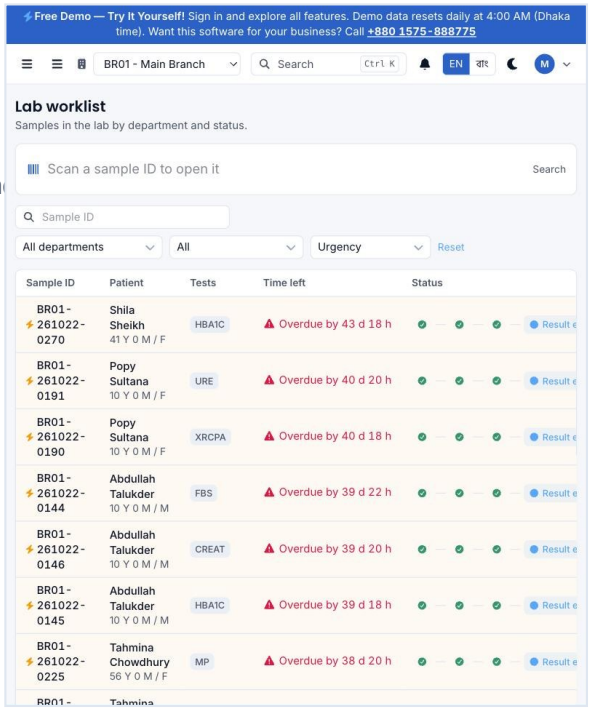

DT Medix sample collection list with barcode IDs and collect buttons

FEATURE 07

Lab worklist with turnaround tracking

See every sample in the lab by department and status, with tim left, urgent pinning and live refresh.

- Turnaround time countdown with overdue alerts
- Urgent samples pinned to the top
- Filter by department, status and urgency
- Status steps from ordered to result entered
- Worklists per branch
- Scan a sample ID to jump straight to it

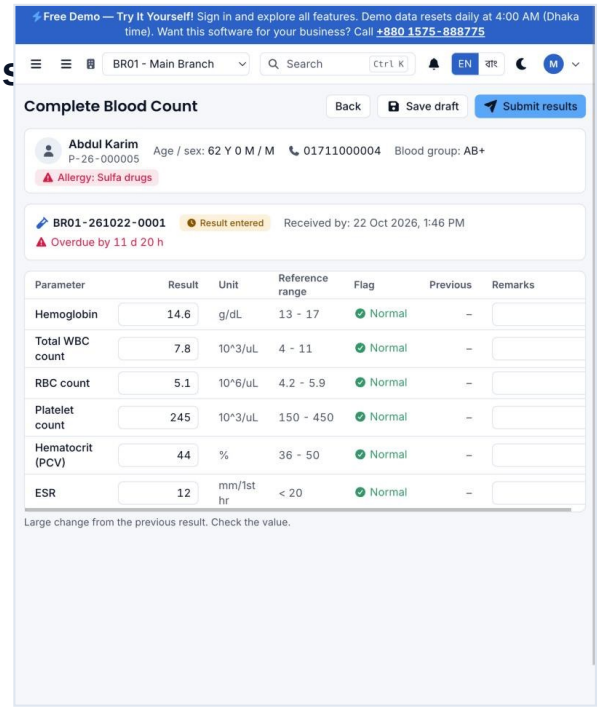

DT Medix lab worklist showing sample IDs, patients, tests and turnaround status

FEATURE 08

Lab result entry with automatic flags

A result grid built for keyboards. The server calculates flags from the right reference range and stores the range used.

- Tab and Enter move through parameters
- Normal, high, low and critical flags with icon and text
- Previous result shown beside the new value
- Delta warning for large changes
- Calculated parameters such as LDL
- Save a draft, then submit results

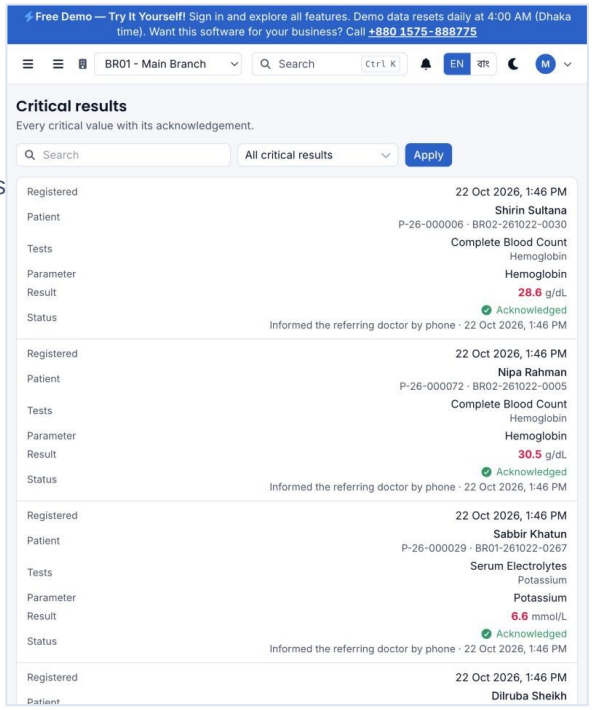

DT Medix result entry grid with reference ranges and normal flags

FEATURE 09

Critical value alerts and acknowledgement

A critical result cannot move on until the team records who was informed and when, and every case stays in a dedicated log.

- Critical limits per parameter
- Acknowledgement with name and time
- Critical results log with filters
- Submission blocked until acknowledged
- Visible to pathologists and managers
- Never sent in a text message

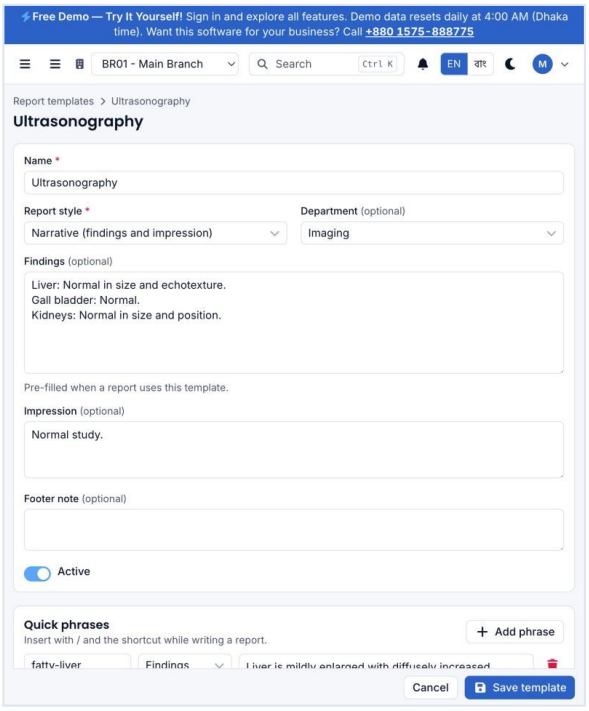

DT Medix critical results log with values and acknowledgement notes

FEATURE 10

Report templates for pathology and imaging

Table templates for pathology and narrative templates for ultrasound, X-ray and ECG with findings, impression and quick phrases.

- Findings and impression editor for imaging
- Quick phrases with a slash shortcut
- Attach images to a result
- Templates per department
- Footer notes and template options
- Preview before you use it

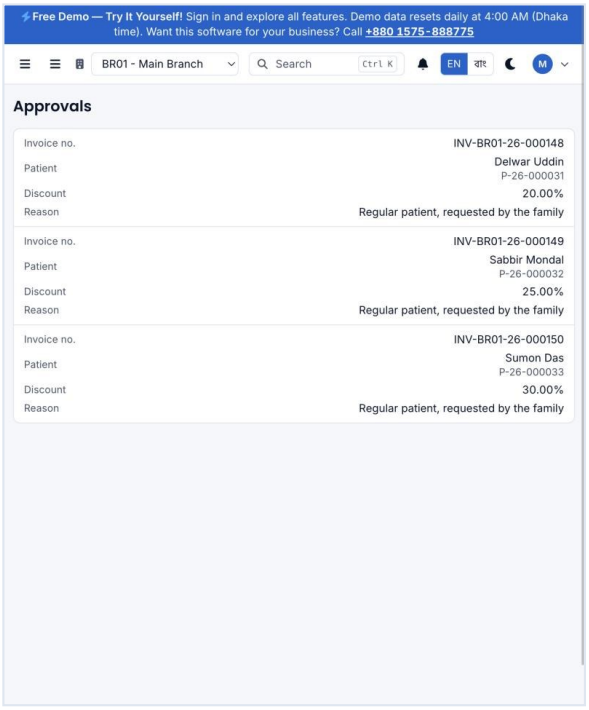

DT Medix ultrasound report template editor with quick phrases

FEATURE 11

Discount, refund and cancellation approvals

Give the counter speed and the owner control. Over-limit discounts and refunds wait for a manager, with a reason on record.

- Discount limit set per center
- Manager PIN approval at the counter
- Refunds need a reason and an approval
- Cancel tests that were not collected yet
- Free and charity cases need a reason
- Every override is logged

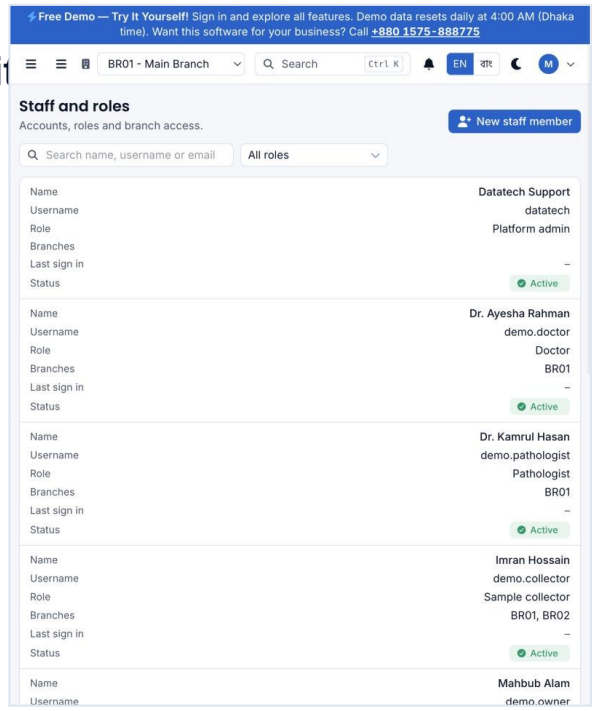

DT Medix approvals screen listing discount requests with invoice, patient and reason

FEATURE 12

Multi-branch control, roles and audit log

Run many branches from one installation. Staff see only their branch while owners see everything.

- Branch switcher on every screen
- Eight roles: owner, manager, reception, collector, lab, pathologist, doctor, accountant
- Menus and actions follow permissions
- Cross-branch access is blocked and tested
- Access log for every patient record view
- Optional two-step verification

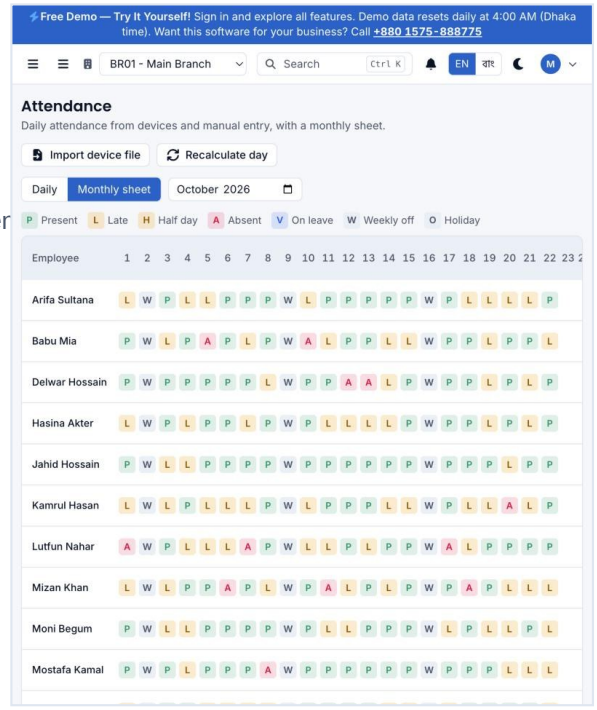

DT Medix staff and roles screen with branch assignments

FEATURE 13

Employee attendance with ZKTeco and manual entry

Fingerprint punches from ZKTeco devices flow in by themselves, and managers can mark attendance by hand when needed.

- ZKTeco push (ADMS) and device file import
- Shifts with grace time and weekly offs
- Late, early and overtime minutes calculated
- Manual entries are never overwritten by devices
- Holidays and approved leave counted
- Monthly attendance sheet by employee

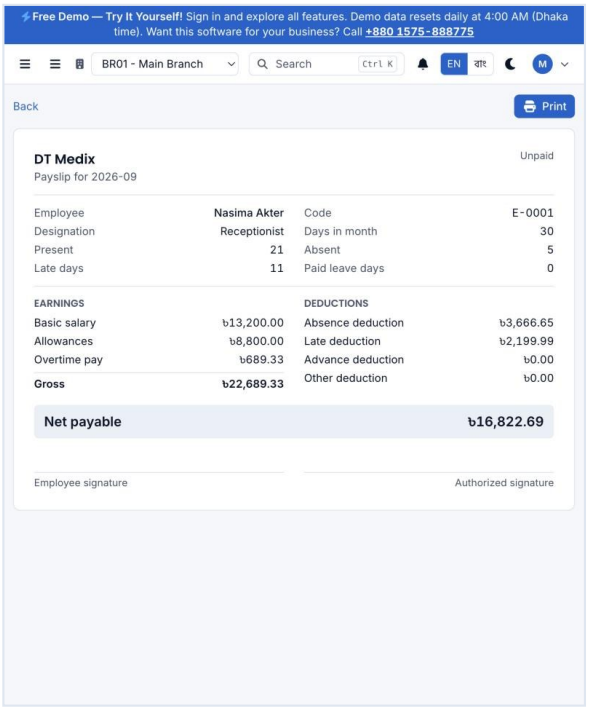

DT Medix monthly attendance sheet with present, late, absent and leave codes

FEATURE 14

Payroll and printable payslips

Prepare the monthly salary run from attendance, adjust advances, finalize it and print payslips.

- Basic salary, allowances and overtime pay
- Absence and late deductions
- Advance and other deductions on a draft
- Finalized payroll is locked
- Mark salaries paid with a reference
- Salary data visible only to permitted roles

DT Medix payslip with earnings, deductions and net payable

ACCESS CONTROL

Eight roles, each with its own menu and actions

Menus, buttons and actions follow permissions. Branch staff only see their own branch, and every record view and override is logged. Owners can change roles and permissions for their center.

ROLE	WHAT THEY DO
Owner	Everything, across all branches: settings, staff, branches, reports, payroll.
Manager	Runs a branch: approvals, staff, catalog, attendance, leave.
Reception	Patients, appointments, test orders, payments and printing.
Sample collector	Collects samples at the counter or on a home visit.
Lab technician	Receives samples, works the worklist, enters results.
Pathologist	Reviews results, handles critical values and report templates.
Doctor	Own schedule, queue and patient visit list.
Accountant	Payments, refunds, dues and payroll.

SETUP

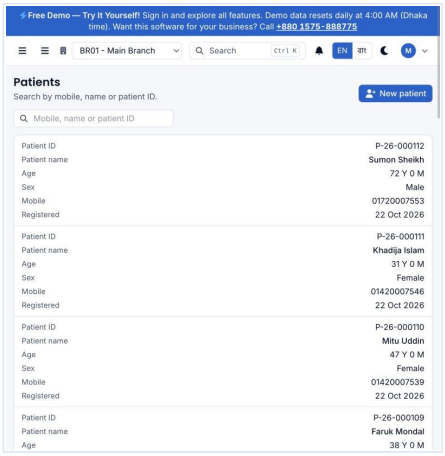

Branches and data separation

- One installation can hold many branches, each with its own staff, orders and samples.
- Optional branch price lists let each branch charge its own test prices.
- Cross-branch access is blocked and covered by automated tests.
- Optional two-step verification for staff sign-in.

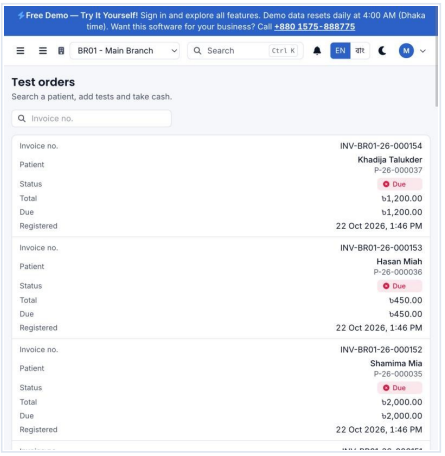

SCREENSHOTS

More screens from the live demo

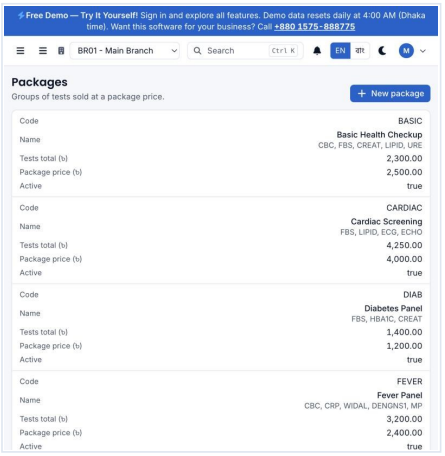

Real screens with sample data. Open the free demo at dt-medix.datatechbd.com to click through every one.

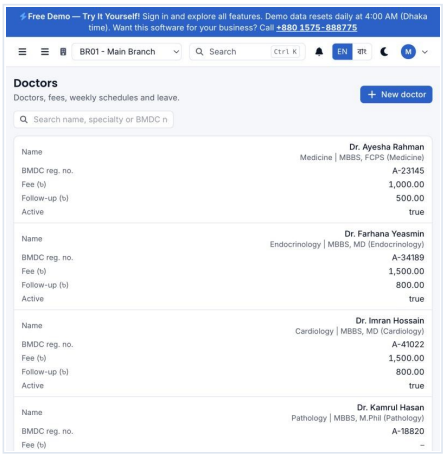

Patient list

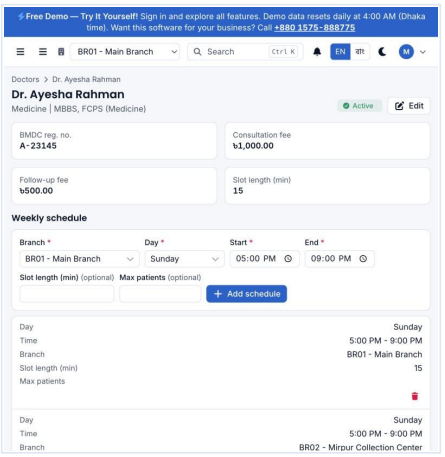

Test orders and invoices

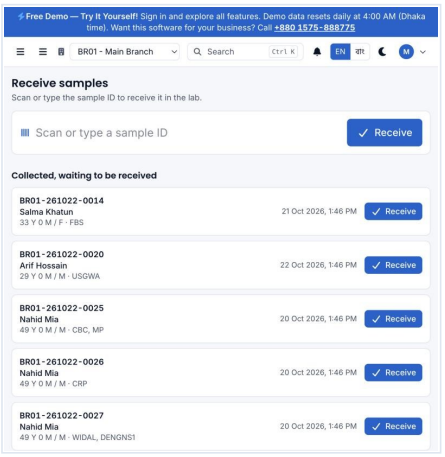

Health packages

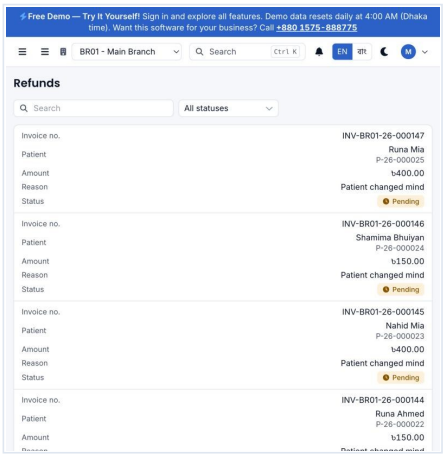

Doctors and fees

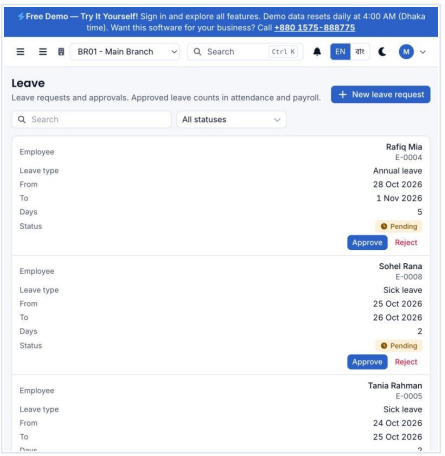

Doctor weekly schedule

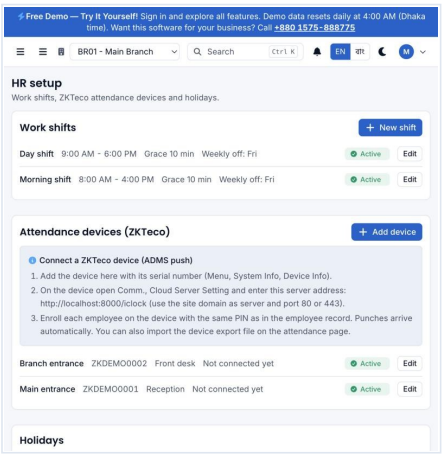

Receive samples

Refund requests

Leave requests

Shifts and ZKTeco devices

SECURITY AND PRIVACY

Patient data, protected by design

Your own installation

Every client gets a separate system and database. Your data is never mixed with anyone else.

Branch isolation

Branch staff cannot open another branch, and automated tests check it.

Access log

Opening a patient record or report is logged with user, time and address.

Roles and approvals

Eight roles with permissions, manager PINs for approvals and optional two-step sign-in.

No results in messages

Message templates block patient names, results and diagnoses.

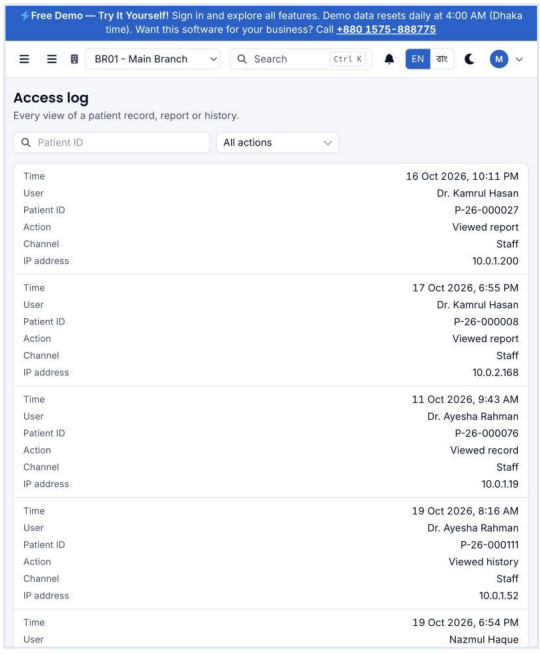

Activity history

Discounts, refunds, approvals and payroll actions leave an audit trail.

DATA PROTECTION

Patient data is handled with care

- Message templates never contain names, results or diagnoses.
- Released reports are never edited in place; a correction is a new version.
- Every patient record view is stored with user, time and address.
- Idle sessions sign out automatically.

Patient access log with user, time and action

WORKS WITH YOUR EQUIPMENT

Devices, printers and channels

DT Medix fits the hardware a diagnostic center already uses.

ZKTeco attendance devices

Devices push punches to DT Medix with the ADMS protocol, or you import the device export file.

Thermal and A4 printing

Invoices and money receipts for 80 mm thermal printers and standard A4 paper.

Barcode labels and scanners

Code 128 sample labels, and keyboard-wedge barcode scanners work with no extra setup.

Desktop, tablet and phone

Runs in a web browser on counter PCs, collection tablets and phones.

REST API

A versioned API for patients, orders and lab data, ready for future mobile apps.

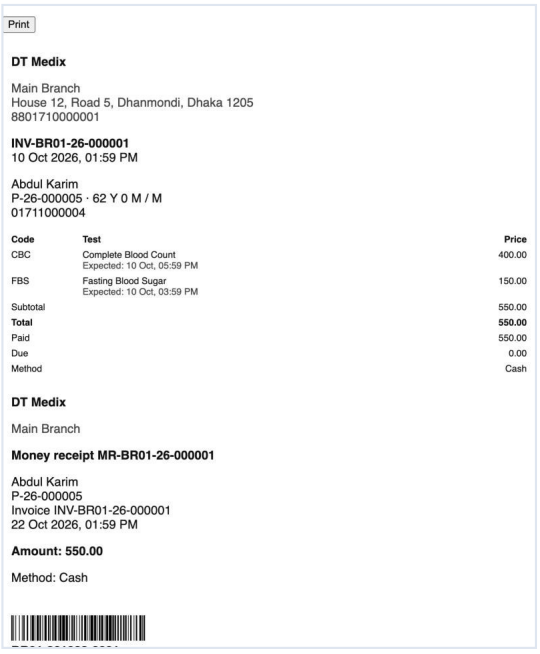

SMS and WhatsApp (rolling out)

Message templates in English and Bangla are ready, with sending channels on the roadmap.

HARDWARE

What you need at the counter

- A computer, tablet or phone with a modern web browser.
- A thermal (80 mm) or A4 printer for invoices and receipts.
- A label printer for sample barcodes (optional).
- A ZKTeco attendance device with push support (optional).

ROADMAP

What is coming next to DT Medix

We build one module at a time and tell you honestly what is ready today and what is on the way.

Verified, signed reports

Pathologist verification, A4 PDF reports with QR checking, release rules and amended report versions.

SMS and WhatsApp notices

Appointment reminders and secure report links, with no results in the message text.

Mobile payments

bKash, Nagad and card payments with cash shift closing and collection reports.

Doctor commission

Referral rules, statements and payouts with locked paid statements.

Owner dashboard and reports

Revenue, dues, top tests, turnaround and expense reports with PDF and Excel export.

Patient portal

Mobile OTP login to view reports, pay dues and book appointments.

Dates are agreed with each client. Ask the sales team which of these you need first.

READY TODAY

- [x] Patients and family linking
- [x] Appointments and tokens
- [x] Reception billing
- [x] Test catalog and packages

COMPARE

Paper register, spreadsheet or DT Medix?

Registers and spreadsheets are a fine start, but they stop where a diagnostic center starts to grow.

	Paper register	Spreadsheet	DT Medix
Duplicate patient detection	✕	✕	✓
Barcode sample labels	✕	✕	✓
Automatic abnormal flags by age and sex	✕	✕	✓
Critical value acknowledgement	✕	✕	✓
Turnaround time countdown	✕	✕	✓
Discount and refund approvals	✕	✕	✓
Multi-branch with isolated data	✕	✕	✓
Attendance from fingerprint devices and payroll	✕	✕	✓
Access log of patient record views	✕	✕	✓

HOW TO DIGITALIZE YOUR DIAGNOSTIC CENTER

Go digital in five simple steps

1. **Try the live demo**
   Sign in as owner, reception, lab or doctor and click every screen. Nothing to install.
2. **Share your setup**
   Tell us your branches, departments, doctors and staff roles.
3. **We install your system**
   We deploy your own installation and database and hand over the first owner login.
4. **Load your catalog**
   Add your tests, prices, reference ranges, report templates and doctor schedules.
5. **Train and go live**
   Train reception, collectors and lab staff, then start billing real patients.

PRICING

A quote built around your center

Every center gets its own installation, so the price depends on your branches and setup. Ask for a clear quote and try the demo first.

Custom quote

one installation per center. One-time or yearly plans, agreed with you.

- Your own installation and database
- Patients, appointments, billing and reception counter
- Barcode samples, lab worklist and result entry
- Attendance, leave and payroll
- Public website with online booking
- Roles, branches and access log

Free demo first. Sales: +880 1575-888775 | sales@datatechbd.com

FAQ

Questions owners ask us

What is DT Medix?

DT Medix is diagnostic center, pathology lab and clinic management software by Datatech BD Ltd. It connects patient registration, appointments, test orders, billing, barcode sample tracking, lab result entry, staff attendance and payroll in one system for Bangladesh.

Who should use diagnostic center management software?

Any diagnostic center, pathology lab, clinic or collection center that bills tests, collects samples and wants fewer mistakes, faster counters and clear numbers. DT Medix suits one counter and multi-branch groups.

Is DT Medix a pathology lab software with barcode sample tracking?

Yes. Every sample gets a unique ID and a Code 128 barcode label. You can collect, receive, reject with a reason and recollect samples, and scan a label to open the sample in the lab.

How does DT Medix flag abnormal and critical lab results?

Each test parameter has reference ranges by age and sex and optional critical limits. When you enter a result, the system flags it as normal, high, low or critical and stores the range used. A critical value needs an acknowledgement before it can move on.

Does it work for multiple branches?

Yes. Run many branches in one installation with a branch switcher, branch-wise staff, optional branch price lists and strict branch isolation. Branch staff see only their branch, and owners see all.

Is the software available in Bangla?

Yes. The whole interface, receipts and message templates work in English and Bangla, patient names can be saved in Bangla, and you can switch language in one click.

Can I manage doctor appointments and tokens?

Yes. Set weekly schedules and leave days per doctor, book free slots, issue token numbers, follow the booked, arrived, in consultation and completed flow, and let patients book on your public website.

FAQ (CONTINUED)

Questions owners ask us

Does DT Medix support ZKTeco fingerprint attendance and payroll?

Yes. ZKTeco devices can push punches to DT Medix using the ADMS protocol, or you can import the device file. You can also mark attendance by hand. Late minutes, overtime, leave and holidays feed a monthly payroll with printable payslips.

How are discounts, refunds and dues controlled?

Each center sets a discount limit. Larger discounts, refunds and cancellations after collection need a manager approval and a reason. Partial payments are supported, and the due balance is always calculated, never typed.

Is patient data safe, and do you send results by SMS?

Each center has its own installation and database. Branch data is isolated, every record view is logged, and message templates never contain results or diagnoses. Report delivery is designed around short notices and secure links.

Does it need internet, and does it work on tablets and phones?

DT Medix runs in a web browser and needs an internet connection. It works on counter PCs, tablets and phones, and warns you when the connection drops so a form is never lost silently.

Which features are ready today and which are coming?

Ready today: patients, appointments, billing, test catalog, samples, lab results, report templates, approvals, branches, roles, attendance, leave and payroll. On the roadmap: signed PDF reports with QR checking, SMS and WhatsApp, mobile payments, doctor commission, the owner dashboard and the patient portal.

How much does DT Medix cost?

Each center has its own installation, so Datatech gives a clear quote based on your branches and setup, as a one-time or yearly plan. Try the free demo first, then contact sales on +880 1575-888775.

Can I try DT Medix before buying?

Yes. The free live demo has sample patients, orders, lab results, staff and payroll. Sign in as any role and explore. Demo data resets every day.
